## Installation

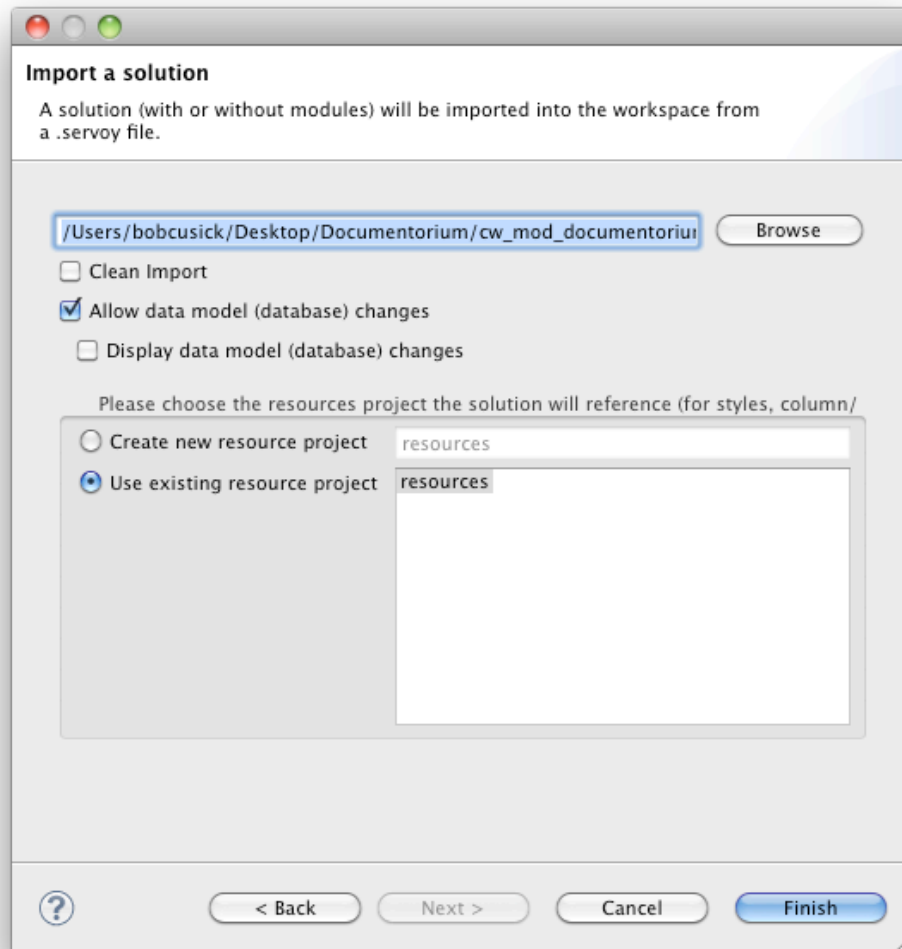

You can use Documentorium to document any Servoy solution - as long as you're using Servoy 5.2 or higher (including 6.x). Simply import the Documentorium, activate the solution you want to document, and double-click the "modules" property of the solution to include Documentorium. Once you're finished documenting the solution - you can simply uncheck Documentorium in the modules list (or you can keep it linked if you want).

Here's a step-by-step version as well:

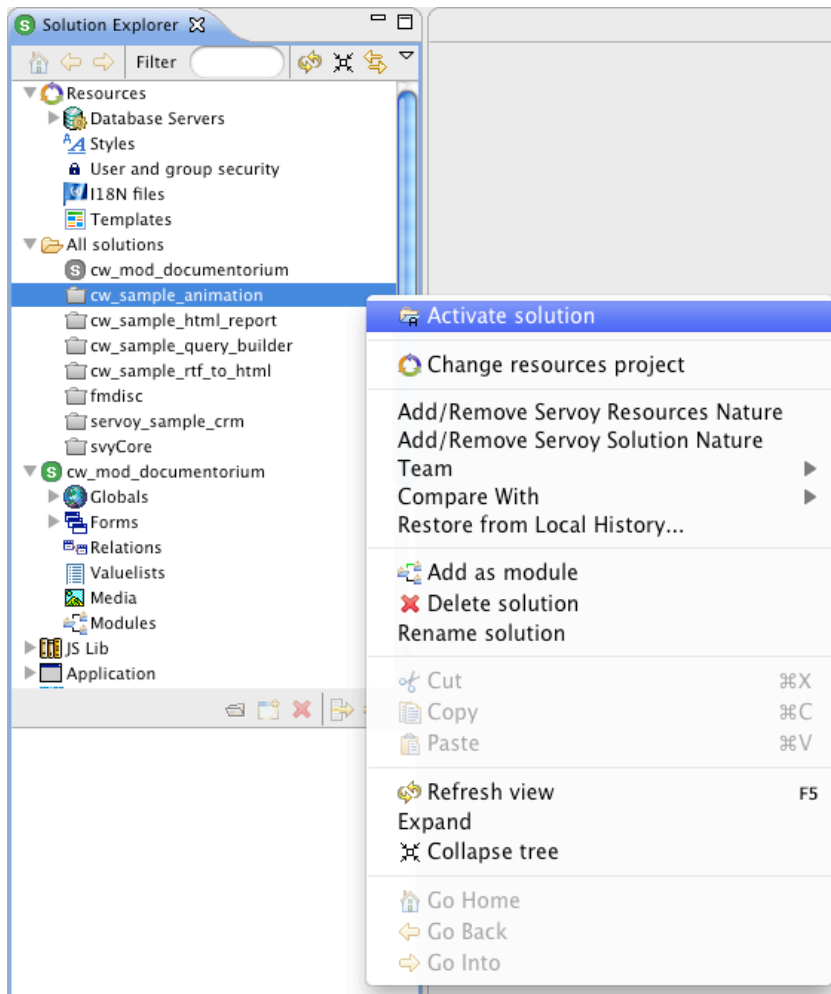

1. Open Servoy Developer
2. Choose "Import..." from the "File" menu and click on "Servoy" in the list to expand it, then choose "Import Solution":

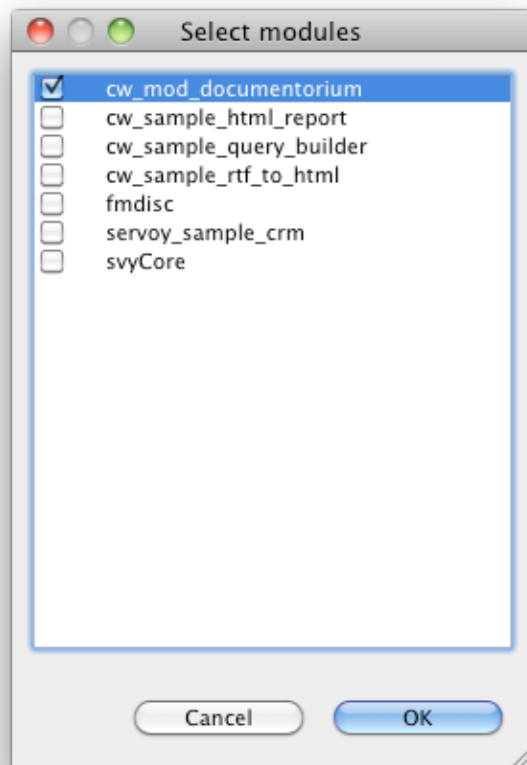

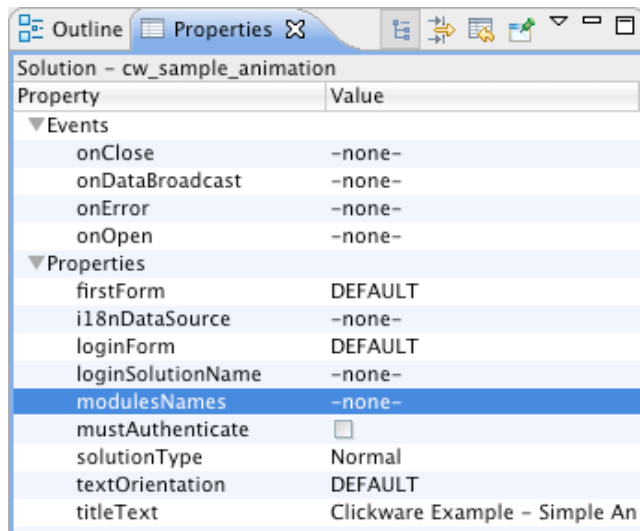

3. Locate the file called “cw\_mod\_documentorium.servoy” on your hard drive - leave the defaults in the dialog (or you can change them if you want to) and click “Finish”:

4. Once the solution has been imported - open your “All solutions” node in the Solution Explorer, choose the file you want to document, right-click it and choose “Activate Solution”:

5. Once the solution is activated - click on the top level of the solution - and from the properties panel double-click “moduleNames” and you’ll see a list of all the solutions that are marked as being modules. Choose “cw\_mod\_documentorium” and click OK:

- Run the smart client - and use the Window menu to navigate to the form called "cw\_mod\_DOCUMENTORIUM" and click the "Document Solution" button.
